Successfully achieving the Guinness World Records for the world's most number of 5,293 drones' swarm flight, the Korea Drone Expo 2024 is now getting fully ready to showcase them at the World Drone Light Show 2024 on 9 May

The Ministry of Land, Infrastructure and Transport (MOLIT, Minister PARK Sang-woo) and the Korea Institute of Aviation Safety Technology (KIAST, President LEE Dae-sung) revealed in the early morning of May 1st that a domestic drone company had successfully set the Guinness World Records for the world's largest number of drones (5,293 units) flied.

* The previous world records was the swarm flight of 5,164 drones recorded by a Chinese company in 2021.

The record-breaking domestic drone company is Uvify* specialized in drone light show as it has been steadily developing and advancing technology related to swarm flights, and has been recognized for its technological prowess by exporting drone aircraft to the US last year.

* Selected 4 times since the year of 2021 as the drone commercialization support project by the MOLIT (development and commercialization of swarm flight technology)

Prior to this achievement on 24 April, Pablo Air broke the Guinness World Records by flying a swarm of 1,068 fireworks drones* (previously 671 number of fireworks drones filed by United Arab Emirates).

* Fireworks drones combine LED lights and fireworks to perform drone light shows.

These World Records set by the Uvify and Pablo Air are scheduled to be revealed to the public for the first time at the Drone Light Show 2024 (20:00~21:00 p.m. on 9 May at Songdo Moonlight Festival Park in Incheon) during the Korea Drone EXPO 2024, jointly hosted by the MOLIT and Incheon Metropolitan City.
